(a) PG Ψ, shelf $s = 2$

(b) layer model, steering along f/H

$\times 10^{-7}$

(c) section across the plume, $x = -0.5$

(d) PG against the layer model

PG, shelf $s = 1$
PG, shelf $s = 2$
PG, shelf $s = 5$
layer model, f/H
shelf

deep, f/H
deep, $f/(H - \delta_E/2)$
shelf, f/H
shelf, $f/(H - \delta_E/2)$

y
x
$\Psi/\max|\Psi_{\mathrm{PG}}|$
relative L_2 difference in Ψ
shelf $s = H_{\mathrm{shelf}}/\delta_E$
